

We are removing the relationship between the Car_Rental_Info and the Car_Theft because we do not consider it to be necessary anymore. Rather, we'll just directly index the relevant car thefts and see if they should be applied based on the car in the Car_Rental_Info table or not.

We're also reflecting the changes to our original database through adding Criminal_Id as a primary_key to the Car_Theft table, as it is no longer tied to Car_Rental_Info.

Additionally, we've also added variables for a start and end date in Booking_Reservations because it was necessary to also track the direct dates of the booking as well.

All of these changes have been propagated into the normalized form and the relational schema accordingly.
